

Ceramic Shuttle Kit

Part # 46928 Right Hand
Part # 46927 Left Hand

Ceramic Shuttle Kit

The Ceramic Shuttle Kit replaces the existing shaft and bronze bearings with ceramic bearings and a new enlarged shaft giving your Mark 50 Bagger a longer trouble free life.

The kit provides **less wear**, therefore causing **less vibration**. It allows a more accurate scoop entry into the bag, resulting in fewer bag drops. The ceramic bearings allow you to run the shuttle at a higher rate of speed allowing for more production to be done in a smaller amount of time!

The kit consist of a complete shuttle assembly with ceramic bearings, an enlarged shuttle shaft, shuttle shaft mounting blocks, mounting hardware, mounting instructions, and diagrams.

Combine the Ceramic Shuttle Kit with a Pressurized Oiler Kit to reduce maintenance time and increase efficiency.

We are s/l/i/c/e/d bread!
